DETAILED ACTION

This Office Action is in response to Applicants' remarks filed on September 26, 2003 and entered as Paper No. 27. Claims 1-3, 6-13 and 15-21 are pending.

Withdrawal of Rejections from Previous Office Action

- The rejection of claims 1-3, 6-13 and 15-21 under 35 USC 103(a) is withdrawn in view of Applicants' arguments that the notches of Besemer et al do not meet the claimed limitation of projections.

Claim Rejections - 35 USC § 103

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 1-3, 6-13 and 15-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Westhall in view of US patent 4,828,386 to Matkovich et al.

Westhall discloses an apparatus for receiving and storing discs. The discs (3) have biologically active substances are bound it. The discs are equivalent to Applicants' chip. The discs are disposed in a tubular receiving element (2). The tubular receiving member is equivalent to Applicants' storage well. According figure 1 of the reference, the discs substantially covers the base of the tube, as recited in claim 3. With respect to claim 4, the spacer elements (4) help to retain the discs in the tube. With respect to claim 9, figure 1 of the reference appears to show the tube in the shape of a square. With respect to claim 10, the abstract of the reference teaches the tube being made of plastic. Figure 3 of the reference shows multiple tubes (1) arranged in a line on a flat retainer member (8).

Art Unit: 1743

Westhall differs from the instantly claimed invention in that there is no teaching of hot or cold formed projections for holding the chip within the well. Also, there is no teaching of the use of a plurality of stacking trays.

Matkovich et al teach a device have a plurality of storage well (20). In one embodiment of the reference, Matkovich et al teach a well having projections (72) on the inner surface of the wall of the well. The projection forms a ring around the inner circumference of the well.

Matkovich et al teaches that the projection serves as a retaining ring. It would have been obvious to one of ordinary skill in the art to incorporate projections into the device of Westhall for aiding in retaining the discs in place, as taught by Matkovich et al.

With respect to the projections being "hot or cold formed", such limitation involves how to make the projection and is not a patentable limitation in claims directed to an apparatus.

With respect to the trays being arranged in a stack, such would have been obvious to one of ordinary skill in the art to allow easier packaging of the wells and easier shipping.

Therefore, for the reasons set forth above, Applicant's claimed invention is deemed to be obvious, within the meaning of 35 USC 103 in view of the teachings of Westhall and Besemer et al.
